Installation Guide
Command WorkStation 5.6
with Fiery Extended Applications 4.2

Fiery Extended Applications Package (FEA) v4.2 contains Fiery applications for performing tasks associated with a Fiery Server. This document describes how to install Fiery Extended Applications Package (FEA) v4.2 on your client computer or the Fiery Server.

Fiery Software Manager is included with all installations of FEA. It guides you through first-time installations of Fiery applications and updates to Fiery applications. For more information, see "Fiery Software Manager" on page 3.

This version of FEA also allows you to update the language support on the Fiery Server and a service technician to update Fiery Server software for Fiery JDF updates.

System requirements for Fiery Extended Applications

You can install Command WorkStation with Fiery Extended Applications (FEA) on

- **A server-based Fiery Server, System 9 or later**

  You cannot install FEA directly on an embedded Fiery Server since it is Linux based.

  If you are unsure what system software is on a Fiery Server, see "To determine the system software version on a Fiery Server" on page 1.

- **Supported Windows and Mac OS user computers**

  For more information, see *Configuration and Setup*.

From user computers with this version of FEA, you can connect to a server-based Fiery Server, **System 8 Release 2 or later**.

TO DETERMINE THE SYSTEM SOFTWARE VERSION ON A FIERY SERVER

Do one of the following:

- In Command WorkStation, connect to the Fiery Server. Click Device Center.

- Print the Configuration page for the Fiery Server. See Server Info > Software.

Installation on a Fiery Server

IMPORTANT

FEA is installed on the Fiery Server as part of the system software installation process from the User Software DVD. Do not uninstall Command WorkStation or FEA applications before you proceed. If you do, this installation fails. An earlier version of FEA must be installed before you can proceed.

During installation, the Fiery service will exit before FEA is fully installed. The service will restart after FEA is installed and the Fiery Server is restarted.

45129244

1 On the Fiery Server, go to www.efi.com/cws5. Click Download Now.

Access the Fiery Server with the Fiery Advanced Controller Interface (FACI), monitor, or Remote Desktop, based on the configuration.

2 Enter your information. Click Submit.

3 Click the download button, save the .exe file to the computer, and then double-click the file.

Fiery Software Manager installs and opens. For more information about Fiery Software Manager, see "Fiery Software Manager" on page 3.

4 In Fiery Software Manager, click Download. Follow the on-screen instructions to install Fiery applications.

If Fiery Software Manager needs an update to continue, click OK. Fiery Software Manager quits, updates, and then restarts automatically.

Installation on Windows computers

If an earlier version of Command WorkStation with FEA is already installed, you do not need to uninstall it before you proceed.

To install Fiery Extended Applications Package on Windows 8.1, do one of the following:

- Before upgrading Windows 8 to Windows 8.1, install the latest Fiery Extended Applications Package v4.1 and then upgrade to Windows 8.1.

- Upgrade to Windows 8.1 and then install Fiery Extended Applications Package v4.2.

TO INSTALL COMMAND WORKSTATION WITH FEA ON WINDOWS COMPUTERS

1 On a Windows computer, go to www.efi.com/cws5. Click Download Now.

2 Enter your information. Click Submit.

3 Click the appropriate download button for Windows, save the .exe file to the computer, and then double-click the file.

Fiery Software Manager installs and opens. For more information about Fiery Software Manager, see "Fiery Software Manager" on page 3.

4 In Fiery Software Manager, click Download. Follow the on-screen instructions to install Fiery applications.

If Fiery Software Manager needs an update to continue, click OK. Fiery Software Manager quits, updates, and then restarts automatically.

Installation on Mac OS computers

IMPORTANT

If an earlier version of Command WorkStation with FEA is already installed, you do not need to uninstall it before you proceed.

TO INSTALL COMMAND WORKSTATION WITH FEA ON MAC OS COMPUTERS

1 On a Mac OS computer, go to www.efi.com/cws5. Click Download Now.

2 Enter your information. Click Submit.

3 Click the appropriate download button for Mac OS, save the .dmg file to the computer, and double-click the file.

Fiery Software Manager installs and opens. For more information about Fiery Software Manager, see "Fiery Software Manager" on page 3.

4 In Fiery Software Manager, click Download. Follow the on-screen instructions to install Fiery applications.

If Fiery Software Manager needs an update to continue, click OK. Fiery Software Manager quits, updates, and then restarts automatically.

Fiery Software Manager

Fiery Software Manager is automatically included with all installations of Fiery Extended Applications (FEA). It guides you through first-time installations of Fiery applications and updates to Fiery applications.

Use the Fiery Software Manager to do the following:

- Manage first-time installations of Fiery applications

- Receive notifications about available updates to Fiery applications

  By default, Fiery Software Manager is set to "Launch at Login" (see Preferences) in order to provide notifications about new updates.

- Manage updates to Fiery applications (manually or automatically)

  Fiery Software Manager checks for updates and downloads them automatically when "Download updates automatically" is selected (see Preferences).

- Remove Fiery applications

- Download language packages to a Fiery Server for additional language support.

- (For service technicians) Download and apply Fiery JDF updates to a Fiery Server.

  For information about using Fiery Integration Manager to update Fiery JDF, see the documentation at http://help.efi.com/fip/index.html.

Fiery Software Manager is available in English, French, Italian, German, Spanish, Brazilian Portuguese, Dutch, Japanese, Simplified Chinese, Russian, Turkish, Polish, and Czech. If your computer's operating system is in another language, Fiery Software Manager displays in English.

TO OPEN FIERY SOFTWARE MANAGER

1 **Do one of the following:**

- On Windows: On the taskbar, double-click the Fiery Software Manager icon.

- On Mac OS: On the Menu bar, double-click the Fiery Software Manager icon.

2 **If needed, accept the license agreement.**

TO REMOVE APPLICATIONS OR INSTALL UPDATES

1 **In Fiery Software Manager, click Manage.**

The Fiery Software Uninstaller displays.

2 **In the Fiery Software Installer, do one or more of the following:**

- **Remove applications:** To remove an application, clear its check box.

- **Install applications:** To install an application, select its check box.

3 **Follow the on-screen instructions.**

Only the selected applications are installed at the end of this process.

TO CHECK FOR UPDATES

1 **In Fiery Software Manager, click Check for Updates.**

Information about available updates displays.

To expand/collapse a list of what is included in a package, click the arrow next to the package.

2 **Follow the on-screen instructions.**

TO SET FIERY SOFTWARE MANAGER PREFERENCES

1 **Right-click the Fiery Software Manager icon. In the shortcut menu, click Preferences.**

2 **As needed, select or clear the following settings:**

- Launch at login (default)

- Download updates automatically

- Show additional features - Select this preference to install server updates for Fiery JDF (service technicians only) or download server language packages for additional language support.

- Help EFI improve its software - Select this preference to allow EFI to collect anonymous usage data from Fiery applications.

Downloading Fiery language packages

Fiery language packages allow you to update the language support of a Fiery Server. Command WorkStation supports the following languages: English, French, Italian, German, Spanish, Japanese, Brazilian Portuguese, Dutch, Simplified Chinese, Russian, Turkish, Polish, and Czech. If Command WorkStation is running in one of these languages and connects to a Fiery Server that does not support the same language, and you have downloaded a Fiery language package that includes support for that language, Command WorkStation may give you the option to install the language package to the Fiery Server. No additional action is required, aside from possibly rebooting the Fiery Server, to update it with the additional language.

Language packages are available for specific languages and specific models of Fiery Server. For more information about language packages, see http://help.efi.com/flp/index.html.

TO DOWNLOAD A FIERY LANGUAGE PACKAGE

1   **Right-click the Fiery Software Manager icon. In the shortcut menu, click Preferences.**

2   **Select "Show additional features".**

3   **Open Fiery Software Manager, and click Check for Updates.**

4   **Select Fiery Language Package and click Download.**

Fiery Language Package appears only if the "Show additional features" preference is selected and if there is an updated language package that you have not yet downloaded.

Uninstall Fiery Software Manager

On Windows, to uninstall Fiery Software Manager, you must uninstall the entire Fiery Extended Applications (FEA) package. Use the Fiery Software Uninstaller from Control Panel.

Connecting a Fiery application to a Fiery Server

The first time you start a Fiery application, you are prompted to configure the connection to the Fiery Server. You can also edit the configuration whenever a change to your Fiery Server or network occurs, such as a changed server name or IP address.

BEFORE YOU BEGIN
•   **Print the Fiery Server Configuration page.**

For instructions on printing the Configuration page, see *Configuration and Setup*, which is part of the user documentation set.

The Fiery Server Configuration page contains information that you need when configuring the connection, such as the IP address of the Fiery Server. Make sure that the Fiery Server is registered in a Domain Name Server (DNS) on your network. For more information, contact your network administrator.

TO CONNECT A FIERY APPLICATIONS TO A FIERY SERVER

1 Start the application (for example, Command WorkStation or Fiery Remote Scan).

2 In the Connect to Server dialog box, do one of the following:

- Enter the IP address or DNS name of a Fiery Server.

- Use Search 🔍 to search for, select, and add a Fiery Server. You can search by a range of

NOTE: If you have saved settings from a previous installation, the Search dialog box may display first.

3 Click Connect.

4 If prompted, log in.

If needed, see your administrator for the password. For information about setting passwords and the default Administrator password for the Fiery Server, see *Configuration and Setup*.

For information about managing and connecting more than one Fiery Server, see Help for the application.

TO CONNECT FIERY HOT FOLDERS TO A FIERY SERVER

1 Start Fiery Hot Folders.

2 In the Hot Folder Settings dialog box, enter a folder name (required) and a description (optional).

If this dialog box does not display automatically, click New.

3 Click Browse to specify a location for the Hot Folder (for example, the desktop).

4 Click Select to connect to a Fiery Server.

The Connect to Server dialog box displays. This is a standard dialog box for Fiery applications and behaves the same way regardless of the application. For more information about how to use it, see "To connect a Fiery Applications to a Fiery Server" on page 6.

5 Click OK.

For more information about Fiery Hot Folders, see Fiery Hot Folders Help.
