Managing licenses for Fiery options on server

To use a Fiery option that is installed on the Fiery server, you must first obtain a unique License Activation Code (LAC) and then activate the license.

Obtaining licenses

You can obtain a license for a Fiery option from your Fiery dealer, the printer manufacturer, or from the [EFI eStore](#).

After obtaining a license, you can perform the following tasks:

- [Activate a Fiery option](#) on page 6
- [Restore an activated Fiery option](#) on page 9

Note: You can restore Fiery options only on Fiery servers with Fiery system software FS400/FS400 Pro and later.

You can activate and restore a Fiery option on the Manage Fiery Options page. For more information, see [Manage Fiery Options](#).

Managing licenses

Managing licenses includes tasks such as activating and restoring Fiery options. The EFI licensing server manages these LAC-related tasks.

When you manage a license, the procedure depends on whether the Fiery server has an Internet connection.

- If the Fiery server is connected to the Internet, information is transferred between the Fiery server and the EFI licensing server automatically.
- If the Fiery server is not connected to the Internet, you must transfer information between the Fiery server and the EFI licensing server manually.

If your organization connects to the Internet through a proxy server, you must configure the proxy server settings.

Configure a proxy server

If the computer finds no Internet connection when it tries to connect to the licensing server, your organization might be using a proxy server to connect to the Internet. You can configure the proxy server settings and then proceed with licensing.

- 1 When you receive a message that says no Internet connection is detected, click **Configure network setting**.
- 2 Type the requested values, and then click **Apply**.

Accessing the Manage Fiery Options page

The Manage Fiery Options page displays the Fiery options that are activated in addition to those that are available to be activated. You can access the Manage Fiery Options page in any of the following ways:

- Command WorkStation: In Device Center > General tab > General Info, click Manage.
- WebTools: In the Home tab, click Manage.
- Fiery Option Package license notifications: Click the Activate License link. For more information, see [License notifications](#) on page 6.

The Manage Fiery Options page opens in your default web browser.

License notifications

Notifications are displayed when licenses of installed Fiery options approach their expiration date or have expired. Notifications of the approaching license expiration are displayed at intervals during the last 90, 60, 30, 15, and 10 days of the license validity period. Notifications appear daily during the last 10 days and after the license has expired. Notifications are displayed:

- In the upper-right corner of Command WorkStation Job Center.
- On the Fiery server listed in the Home tab of Command WorkStation.

The following links are present on the notifications:

- Activate License: Opens the Manage Fiery Options page to activate the License Activation Code (LAC). Activate License appears during the last 90 days of the license validity period.
- Learn more: Opens the Managing licenses for Fiery options Help.
- More icon (three dots) hides the selected notification until the next expiration interval. However, notifications appear daily during the last 10 days of the license validity period and after the license has expired.

Note: You can view the license expiration date of the Fiery option in Device Center, Home tab of WebTools, and on the Manage Fiery Options page.

Activating a Fiery option

When you activate a Fiery option, make sure you record the following:

- ID of the Fiery server. On the Configuration page, you can find the ID under BIOS Setup. In Command WorkStation, you can find the ID in Device Center under Server Configuration on the General tab. Click RIP and look for the ID under BIOS Setup on the right.
- Name of the option
- License Activation Code (LAC)

You can activate options automatically or manually, depending on whether the Fiery server on which you are activating the options is connected to the Internet. For more information, see [Managing licenses](#) on page 5.

Activate a Fiery option automatically

You can activate a Fiery option automatically if the computer is connected to the Internet.

- 1 Open the Manage Fiery Options page. (See [Accessing the Manage Fiery Options page](#) on page 6.)
- 2 Click Activate, and then click Continue to agree to the terms and conditions of the license agreement.
- 3 Type the LAC in the License Activation Code field, and then click Continue.
- 4 Click Activate.
- 5 If the activation requires a restart, you can either click Restart to restart now or click Finish if you want to activate additional options before restarting. If the activation does not require a restart, just click Finish.

Activating consecutive License Activation Codes (LACs)

On Fiery options that have a license validity period of 90 days or less, you can activate a new (consecutive) term license while simultaneously using the current term license. The current term license is active until expiration after which the consecutive license seamlessly starts its term. This ensures that there is no gap between the expiration of the current term license and the start of the consecutive term license.

You can activate a consecutive term license in the same manner as you have activated your current term license. For more information, see [Activate a Fiery option automatically](#) on page 7.

Additional information

- Consecutive term licenses can be activated only for Fiery options installed on Fiery servers with Fiery system software FS400/400 Pro and later.
- The Fiery server must be connected to the Internet to activate a consecutive term license.
- Notifications of license expiration are displayed at intervals of 90, 60, 30, 15, 10 days, and daily after 10 days. The consecutive term license can be activated at any time after the ninetieth (90th) day notification is displayed.
- You can utilize the full term of their current license even after activating the consecutive term license. The validity period of the consecutive term license will commence only after the expiration of the current term license.
- If a trial license is currently active, you can simultaneously activate a consecutive term license but the validity period of the consecutive term license will commence only after the expiration of the trial license.
- If a consecutive term license is not activated before the expiration of the current term license, the Fiery option will be unavailable after the expiration date and you will need to obtain a new license.

Activate a temporary license automatically

During first-time installation of a Fiery option, if the EFI licensing server is unavailable, you can continue to activate the Fiery option using a temporary license. You can activate a temporary license on the Manage Fiery Options page.

1 Access the Manage Fiery Options page in one of the following ways:

- In Command WorkStation Device Center, click the General tab, click General Info, and then click Manage.
- In WebTools, in the Home tab, click Manage.

On the Manage Fiery Options page, if the LAC cannot be activated, a message is displayed that the license server is unavailable and a temporary license can be activated.

2 Click the Activate Temporary License button.

3 Click Restart.

You can view the expiration date of the temporary license in Device Center, the Home tab of WebTools, and on the Manage Fiery Options page.

Additional information

- The temporary license option is available only for Fiery options installed on Fiery servers with Fiery system software FS400/400 Pro and later.
- To activate a temporary license, the Fiery server must be connected to the Internet.
- You can activate a temporary license only:
 - If the EFI licensing server is unavailable.
 - During the first-time installation of the Fiery option.
- You cannot activate a temporary license if you reinstall the Fiery system software.
- A temporary license is valid only for 35 days. During this period, you can activate your LAC.

Activate a Fiery option manually

If the computer is not connected to the Internet, you must manually transfer data between the computer and the Fiery licensing website. You will generate a request file, submit it to the Fiery licensing website to obtain a license file, and then use the license file to activate the option.

- 1** Open the Manage Fiery Options page. (See [Accessing the Manage Fiery Options page](#) on page 6.)
- 2** Click Activate, and then click Continue to agree to the terms and conditions of the license agreement.
- 3** Type the LAC in the License Activation Code field, and then click Continue.
- 4** Click Continue to proceed with the manual process.
- 5** Click Create Request File and save the file.
- 6** Copy the request file to a computer that is connected to the Internet.
- 7** Open a browser and go to <https://licensing.fiery.com/>.
- 8** Click Browse, select the request file, and then click Upload.
- 9** Click Continue.

- 10 Click Download License File and save the file.
- 11 Copy the license file to the computer where you first entered the License Activation Code.
- 12 Return to the Generate License window and click Yes.
- 13 Click Browse, select and open the license file, and then click Activate.
- 14 If the activation requires a restart, you can either click Restart to restart now or click Finish if you want to activate additional options before restarting. If the activation does not require a restart, just click Finish.

Restoring an activated Fiery option

If previously activated options are unavailable and the computer cannot restore them by contacting the licensing server, you can use the Manage Fiery Options page to restore the options.

Note: You can restore Fiery options only on Fiery servers with Fiery system software FS400/ES400 Pro and later.

You can restore options automatically or manually, depending on whether the computer is connected to the Internet. For more information, see [Managing licenses](#) on page 5.

Restore Fiery options automatically

You can restore previously activated Fiery options automatically if the computer is connected to the Internet.

- 1 Open the Manage Fiery Options page. (See [Accessing the Manage Fiery Options page](#) on page 6.)
- 2 Click Advanced Settings in the upper-right corner and then click Restore.
The Fiery option is restored.
- 3 Click Finish.

Restore Fiery options manually

If the computer is not connected to the Internet, you must manually transfer data between the computer and the EFI licensing website. You will generate a request file, submit it to the EFI licensing website to obtain a license file, and then use the license file to restore the options.

- 1 Open the Manage Fiery Options page. (See [Accessing the Manage Fiery Options page](#) on page 6.)
- 2 Click Advanced Settings in the upper-right corner and then click Restore.
- 3 Click Continue to proceed with the manual process.
- 4 Click Create Request File and save the file.
- 5 Copy the request file to a computer that is connected to the Internet.
- 6 Open a browser and go to licensing.efi.com.

- 7 Click Choose File, select the request file, and then click Upload Request File.
A license file is generated.
- 8 Click Download License File and save the file.
- 9 Copy the license file to the computer where you are restoring options.
- 10 Return to the Generate License window and click Yes.
- 11 Click Browse, select and open the license file, and then click Restore.

Troubleshoot Fiery options

If problems occur when you are managing Fiery options, you can troubleshoot the problems.

Activation generates an error message

Error messages provide details about errors and suggest actions to take.

- 1 Check [Error messages](#) on page 11 for more information about the error. If the message guides you to contact technical support, you must first generate a diagnostic log file.
- 2 To generate a diagnostic log file, open the Manage Fiery Options page. (See [Accessing the Manage Fiery Options page](#) on page 6.)
- 3 Click the Advanced Settings icon in the upper-right corner, and then click Diagnostic Log to generate a diagnostic log file.
- 4 When you contact technical support, provide the following information:
 - ID of the Fiery server. For more information, see [Activating a Fiery option](#) on page 6.
 - Name of option that you are trying to activate
 - License Activation Code (LAC)
 - Diagnostic log

Incorrect system clock settings

If the date and time settings on the system clock are incorrect, your computer may not connect with the EFI licensing server. If this occurs, reset your computer's clock.

Error messages

Error messages give you details about an error and suggest actions to take. Error messages appear in the license activation software and on the EFI licensing website.

For additional information or support, registered users may start a discussion through [Fiery Communities](#).

| Message ID | Error message | Action |
|---------------------------------------|--|--|
| From the license activation software: | | |
| OFA0020 | The LAC is not in the correct format. Try entering the LAC again. Refer to the LAC card if you have one. | The LAC is not in the correct format. Try entering the LAC again. Refer to the LAC card if you have one. |
| OFA0010 | The license file you selected is invalid, select a different one and try again. | During manual activation, you obtained a license file from the EFI licensing website. Check that you selected the correct license file to upload. If the error still occurs, you can restore Fiery options and try to activate again. |
| OFA0090 | Internal error. Please call EFI technical support. | There is a problem with the license file. Try repeating the activation process from the beginning. If the error occurs again, restore the options and try to activate again. If the error still occurs, contact technical support and provide the error code shown in the message. |
| OFA0060 | Error <number> Proxy configuration is incorrect or proxy server is down. | There is no Internet connection. Check that the proxy settings are correct and try again. If the problem persists, contact your network administrator. |
| OFA0030 | Internet connection could not be established. | There is no Internet connection. Check that the proxy settings are correct and try again. If the problem persists, contact your network administrator. |
| OFA0080 | Error <number> Licensing session expired. Start licensing session again. | The license activation software was used in a different browser window more recently than this one. To continue, close this window and open a new one. |
| OFA00105 | Error <number> The license activation software module is corrupted and Fiery system software must be reinstalled. | The license activation software module is corrupted and Fiery system software must be reinstalled. Contact technical support and provide the error code shown in the message. |

| Message ID | Error message | Action |
|--------------------------------|---|--|
| OFA0070 | Error <number> The license activation software module is corrupted. Reinstall Command WorkStation and try again. | Reinstall Command WorkStation and try again. On Windows, go to Control Panel > Add or Remove Programs and start Fiery User Software in maintenance mode. Select the Repair option and then select Command WorkStation. On Mac OS, use Fiery Software Uninstaller to uninstall Command WorkStation, and then reinstall Command WorkStation. |
| OFA0050 | Sorry we cannot deactivate the option requested. Please contact support for more information. | Try to restore Fiery options and deactivate again. If the error still occurs, contact technical support. |
| OFA0040 | Sorry we cannot reactivate the option requested. Contact support for more information. | Try to restore Fiery options and reactivate again. If the error still occurs, contact technical support. |
| OFA00115 | None of the options could be restored. | No previously activated licenses were found for this computer. If you had licenses that were previously activated, contact technical support |
| From the EFI licensing server: | | |
| EBIS0004 | The LAC is not recognized. Check that you entered the correct LAC. Refer to the LAC card if you have one. | The LAC is not recognized. Check that you entered the correct LAC. Refer to the LAC card if you have one. |
