- Print mode

The print mode for Roland DG drivers is displayed as shown in the example below.

The first name “Standard” refers to the print quality, which represents overall print speed. There are three print qualities in VG-640 and VG-540 printers, listed here in increasing order of quality.

- High Speed
- Standard
- High Quality

The section inside parentheses “[12p (A) Multilayer]” represents the quality and layering capability of a print mode. The higher the number associated with “p”, the higher the quality for that print speed.

“(A)”, “(B)” represent the dot sizes. “(A)” means larger dot sizes, “(B)” means smaller dot sizes.

“Multilayer” means that this print mode is capable of printing multiple layers of ink, depending on the settings selected on the “Special Settings” tab.

“CMYK->White” means that this print mode will print White on top of CMYK, in the same pass using split head printing. Similar settings are also available for other print modes.

The section inside the second set of parentheses [2 PASS] represents the total number of passes per line that will be used to print using the selected print mode.
